

Comportarea unor soiuri și hibrizi de piersic pavi la atacul de basicarea frunzelor (*taphrina deformans*) (berk. tul.) în condițiile Campiei de Vest a României

Snejana DAMIANOV, Olimpia IORDANESCU, Lavinia MICU, Gh. SIMERIA, D. PATENAC -
USAMVB Timișoara

The researches were effected at Sânnicolaul – Mare nurserz Timiș district in a peach pavi plantation, wich set up in the year 2002 in a intensive system, having a number of 8 varieties and hibrids. After the effected observations concerning the behaviour of those varieties and hibrids to *Taphrina deformans* attack, the C81 hibrid and Fortuna variety were low attacked, hibrids were middling attacked by that pathogenus. Strongly and very strongly attacked were the NJC 110 and NJC 81 hibrids.
