

Analiza infrastructurii sanitare din județul Iași și România

Gh. PETRESCU, D. BOLDUREANU, Gabriela MARINESCU - Universitatea de Medicină și
Farmacie "Gr. T. Popa" Iași

The health care infrastructure is a complex of buildings, equipment, medical labs, and sanitary units. In our study we analyze the Iași County and the Romanian infrastructure in health system for the last couple of years. A special attention is dedicated to the Iași County, because of the presence of “Gr.T.Popa” University of Medicine and Pharmacy, a well-known institution both in the country and in Europe, who develops and polarizes the educational and research process in medical sciences.
