

## Derivati de imidazol cu actiune fiziologica

Maria POROCH-SERITAN - Universitatea "Ștefan cel Mare" Suceava

The heterocyclic compounds with imidazole ring are parts of many derivatives with drug action and could be obtained either by synthetic methods or by isolation from plants or animals. The known drugs with imidazolic structure legitimate the intensive researches in the imidazole derivatives area, in order to obtain of compounds with biological activity. The paper presents in synthetic way the imidazole derivatives with physiological activity and those main applications in the therapy, in order to study the relationship between the chemical structure and the pharmacological properties.
