

Observatii privind posibilitatea imbunatatirii sistemului roman de taxonomie a solurilor (Bucuresti, 2003)

C. RUSU, I.C. STANGA, L. NIACSU, I. VASILINIUC - Universitatea "Al. I. Cuza" Iași

The Romanian Soil Taxonomy System (2003) has been elaborated and adopted with the purpose of “updating” an informational fund accumulated during 20 years by the Romanian specialists, but also for correlating it with WRB-SR (1998). The system’s flexibility allows some completions and corrections, as a consequence of some survey, mapping, diagnosis or taxonomic classification difficulties occurrence. The field surveys realized in the last 3 years by the members of the pedology team from the Faculty of Geography and Geology (University „Al.I.Cuza”), as well as some correlation attempts, imposed a series of observations, in the idea that they may bring some improvements to the actual system, with the purpose of avoiding some conceptual-theoretic problems, as well as easing the practicing work.
