For meadows overseeding must be use complex agricultural units which realise at one pass a partinal manufacture of soil and seeding. To realise thesa complex works different agriculturalunits wevrw made. In the pager are presented the tests made with a complex agricultural unit which realise at only one passing a partinal manufacture of soil and seeding. For soil partinal manufacture it is used a horizontal rotor equiped with rotary hoes knives and for seeding it is used an universal sowing machine with mechanic dose. The results of tests show that the studied unit is good and realise working indexes is according with techological demands.
