

Influenta epocii de semanat și a fertilizării asupra calității boabelor de grâu de toamnă (*triticum aestivum*)

Elena PINTEA - Societatea Agricolă Moldova Tiganasi

Within an experience organized during the 2004-2005 agricultural year, into the Pruteș vegetal farm, belonging to the Moldova-Țigănași A.S., we could observe that the highest hectolitic weight was obtained by the Eliana variety, seeded in the 1st epoch (7th54P54nd epoch (21 October), with 79.2 Kg. October), with 78.8 Kg on the N agrofund and by the Dropia variety, seeded in the 2
The highest gluten content, of 37.2%, was obtained by the Arieșan variety, seeded in the 2nd epoch, on the N162P54 agrofund.
