

## Influența epocii de semănat și a fertilizării asupra calității boabelor de grâu de toamnă (*Triticum aestivum*)

PÎNTEA Elena - Societatea Agricolă Moldova Țigănași

Within an experience organized during the 2005-2006 agricultural year, into the Pruteț vegetal farm, belonging to the Moldova-Țigănași A.S., we could observe that the highest hectolitic weight was obtained by the Rapid variety, seeded in the 1st epoch (7th October), with 74.9 Kg on the N54P54 agrofund and by the Rapid variety, seeded in the 2nd epoch (21st October), with 74.4 Kg.

The highest gluten content, of 32.8%, was obtained by Flamura 85 variety, seeded in the 2nd epoch, on the N162P54 agrofund.
