

Studiu de colecție al unui sortiment nou de legume Solanacee pentru fructe

MUNTEANU N., STOLERU V. - USAMV Iasi

The paper presents behaviour of certain new cultivars belonging to the Solanaceae vegetable for fruit in the environmental conditions from the collection of the experimental field of the Agronomical University of Iasi. The results are referring to 10 tomato cultivars, 14 pepper cultivars and three egg plant cultivars. The main information are following: plant vigour, fruit characteristics, places of cultivation and yield suitability.
