

Specii sălbatice de Compositae (Asteraceae) - potențial legumicol din județul Iași

MUNTEANU N., SÎRBU C. - USAMV Iasi

The paper presents some wild Asteraceae species with vegetable potential which can be met in the natural habitats from Iassy county. The most important ones are following: *Achilea millefolium*, *Artemisia absinthium*, *Bellis perenis*, *Carlina acaulis*, *Centaurea cyanus*, *Cichorium intybus*, *Cirsium arvense*, *Cirsium oleraceum*, *Galinsoga parviflora*, *Helianthus tuberosus*, *Hypochoeris radicata*, *Lapsana communis*, *Petasites hybridus*, *Sonchus arvensis*, *Sonchus oleraceus*, *Tanacetum vulgare*, *Taraxacum officinale*, *Tragopogon orientalis*, *Tussilago farfara*. For five of them (yarrow, Jerusalem artichoke, common sowthistle, dondelion and coltsfoo) a detailed description is done.
