

## Analiza structurilor agrare din județul Arad

DINCU Ana-Mariana, SÂMBOTIN L., GĂVRUȚA A., MĂNESCU Camelia - USAMVB Timisoara

In this study it is analyzed the agricultural exploitations dimensions, individual at the level of the year 2004, on Arad county level. Also in the study an detailed analyze of the useful agricultural surface arrangement is done on work lots, being calculated the medium dimension of a lot for every size class. The modern and functional agricultural exploitation functioning and creation on the principle of the market economy, assures the development of the agricultural production to assure the alimentary security and development of the rural area inclusively the environment protection. The landed fund is one of the main factors of production in agriculture and sylviculture. The structural analyze or on categories of usage of the agricultural landed fund, analyze of the juridical regime of exploitations from Arad county, are presented in this study. Arad County has over 7754 km<sup>2</sup>, respectively 775.409 ha. In the 2000- 2004 analyzed period the total surface was maintained constantly. Instead, the agricultural surface and his structure had some little insignificant oscillations. That's why we will analyze and interpret only the statistic from the year 2004.
