

Dificultăți în realizarea agriculturii durabile în România

BORZA Mioara - Universitatea "Alexandru Ioan Cuza" Iași

The notion of sustainability is already well known by majority of scientific and research institutions, in the productive units, as well as by a great part of population interested for the economic and social future of our country. The concept of sustainable development is assimilated to agricultural sector, mostly by reason that in Romania the agriculture needs of recovery urgently. In the context of existence the numerous difficulties, the adoption of the sustainability concept in agriculture is proved to be more than a necessity. Currently, the Romanian agriculture is marked by a long and difficult period of transition from the economy centralized to the market economy and, recently, to the European economy. In this context, the aim of this paper is to analyze the principals impediments in the application of the sustainability concept in agriculture, with the goal to propose the solutions to eliminate these, so that the notion of sustainable agriculture don't be only a theoretical training, but also a practical reality in the approach future.
