

Language Learning for Professionals in ICT and Agriculture

LaProf is a 24-month long Multilateral Project financed by the European Commission that aims to promote language awareness to immigrating workforces in 2 particular sectors: **ICT** and **Agriculture**.

The project analyses the language competencies and learning needs of two targeted user groups: IT teachers from **Estonia, Lithuania** and **Latvia** that want to move and work in **Finland**, and agricultural professionals from Eastern European countries like **Romania** that want to move and work in **Greece**. LaProf hopes to assist the candidate immigrants and ease their cultural integration by familiarising them with the terminology and cultural issues in the 2 sectors.

LaProf encourages innovation in the development of high quality language learning and teaching tools both for teachers and professionals by creating:

- **a language learning guide containing:** a description and guidelines for the English language modules; and links to online resources to facilitate immigrants' assimilation - with information about work opportunities, available language schools, and accommodation in the target countries (Greece and Finland)

- **a LaProf Web portal** where learners can access learning resources and methodologies and where producers of digital language learning resources can upload their resources and make them publicly available for all interested users to find

- **interactive online language learning modules** in English, French, Romanian, Hungarian, Estonian and Russian in the agricultural and ICT sectors providing practice in these sectors' relevant terminology

- **a set of policy recommendations** for language teachers, professional associations and decision makers that deals with both language learning, vocational education and training around Europe
