

Dear partner,

Aeres University of Applied Science **Almere** is going to move! Next college year 2021/2022 our classes and activities will be at the new location in Almere. The construction of our new beautiful building has started June 2020. It already carries the name 'Green Lung'. The open design and integration of greenery in and around the building will make it a healthy and inspiring learning environment for our students. Literally the greenest university in the Netherlands!

The Green Lung will be on the site of the **Floriade in 2022**. Our new university building is part of the campus in cooperation with Flevo Campus, a physical place where education, research and science come together. Not only for students and researchers, but also for residents of Almere and beyond to get to know and think about the urban life of the future. Together we let the city live.

For a **student vlog** about the progress:
