

Dear Colleagues,

You can see that for the final year, courses run only from September til January (as then students go on internship.)

For the courses they can choose between two main disciplines:

- **EPA** - environnement, process and analysis which consists of process engineering, environmental engineering and analysis, management and sustainable development

- **CTV** - chemistry and technologies for the living world which consists of biological engineering, formulation and characterization, green chemistry, chemistry and biotechnologies for agrochemistry and health.

Students have to choose a total of 30 ECTS credits within the possible choices of each major. Part of the ECTS credit chosen can be in the program Master in Water treatment, molecular chemistry or chemistry of materials.

Nomination for candidates have to come through [before June 15th](#).

Looking forward to welcoming your students!!
