## Abstract

As a result of the mycological researches during 2009-2010 on different ornamentals plants, the authors pointed out on new micromycetes for Romania, new host-plants for already known micromycetes and rarely described micromycetes in Moldavia. The authors observed the frequency of the pathogenical agents on plants, on the cultivated flowers in green houses, on trees and ornamental bushes and on weeds from filed cultures. 2 new micromycetes for Romania, 2 new hostplants for the central part of Moldavia, 13 new host-plants already known micromycetes for Romania and 5 micromycetes rarely described in Romania are reported. **Key words:** new micromycetes, ornamental plants, Moldavia
