Abstract

The paper aims to present a synthesis of data from the literature on the situation of Romanian agriculture in the European context, emphasizing the concept of agricultural farm development by attracting European funds. The research aimed at the diagnostic analysis of the results obtained by agricultural farms and the impact of European funds in the context of integration into the European Union. It is found that, after Romania's accession to the European Union, the possibilities for the development of agricultural farms have increased, as a result of their advantage of accessing European funds, with a fairly large share of their non-reimbursement. In this context, the research started from the economic-financial analysis of the situation of agriculture in the North-East Development Region, according to which to proceed to adopt measures that will lead, first of all, to the increase of agricultural production and, in secondly, to make it more efficient by attracting European funds. The need to reorganize this sector according to European Union standards requires the adoption of a new model of planning, organization, motivation, coordination and control at the level of all its mechanisms. From the point of view of the measures offered in support of the European Union, it should also be mentioned that, atypically, for the EAFRD, it was not the aggressive media coverage that determined the placement of certain counties in the first positions, but rather the capital inflows that penetrated the last period in these counties, in conjunction, most likely with open management by the local authorities involved. Research methodology was based on the investigation of information from official documents, but also from technical-economic analysis, SWOT analysis and case studies. The results obtained through the research undertaken can be models for farmers to develop their agricultural activity and improve the technologies used, both in plant production and in animal husbandry.
