## **Abstract**

The scientific research reflected in this study aimed to study the behaviors of the sensitivity of some bacterial species highlighted by the abscesses of pigs slaughtered against antibiotics and the interpretation of the microbiological aspects that define them. The antibiogram results of microbial strains isolated from samples of *Escherichia coli*, *Staphylococcus aureus* and *Streptococcus pyogenes* abscesses were evaluated in antibiotic substances, determining various sizes of susceptibility areas.

**Key words:** Abscesses, Microbial species, Antibiotic sensitivity, Antibiotic substances.
