

## Placement Slovakia Work Experience Abroad

Placement Slovakia is a programme providing comprehensive service for university/college students, graduates and young professionals from across the European Union interested in **gaining work experience** in Slovakia.

We are a non profit training organisation specializing in arranging international internships in Slovakia in the frame of LLP Mobility Programmes – Leonardo da Vinci and Erasmus (now Erasmus +) **with different approach.**

**Our services are completely free** for students and universities alike.

**We provide accommodation** with every internship position and a **full local support** for trainees during their internship period in Slovakia.

We arrange internships in English speaking companies of all sizes, both Slovak and well-known international corporations in a wide variety of industries, with a minimum duration of 5 months.

Our **extensive network** of partner companies, local chambers of commerce and clusters at one side and years of **professional experience** on the other side, allow us to help individual trainees in gaining valuable work experience in Slovakia, whilst **improving the skills** gained during their studies.

We cooperate with universities and educational organizations across the EU, where we search suitable candidates for our internship positions.

We believe that also **your students** find our programme beneficial and we will soon welcome them in Slovakia.
